

# Setup COMBO at ECCS

---

Github

<https://github.com/tsudalab/combo>

Clone the repository (suppose you are at the home directory)

*git clone https://github.com/tsudalab/combo.git*

Setup python environment for python2.7

*pyenv shell anaconda-4.0.0*

\*This setting is temporal for the present terminal.

Thus, you need to type it every time you open new terminals.

Run setup.py

*cd combo*

*python setup.py install --user*

\* At ECCS, user do not have the permission to install the standard directory.  
Thus, we install COMBO to user directory.
